Conflict minerals

The Dodd-Frank Wall Street Reform and Consumer Protection Act came into force on 21 July 2010. The Dodd-Frank Act and similar U.S. Securities and Exchange Commission regulations require certain companies to disclose the extent to which the products they manufacture or commission for manufacturing contain conflict minerals originating from mines in the Democratic Republic of Congo ("DR Congo") or its neighbouring countries. Conflict minerals are tantalum, tin, tungsten and gold – which are used in many electronic components and computer products. As we are neither a US company nor a listed company, we ourselves are not subject to the Dodd-Frank Act (DFA) Section 1502 Regulation.

GLYN GmbH & Co KG is an authorised distributor of electronic parts and components. As a distributor, we are unfortunately unable to make material declarations, as we do not have specific knowledge of the production process or the ingredients in the products we sell. With regard to the ingredients, we are 100% dependent on the information and declarations provided by the respective manufacturer.

GLYN is a member of the FBDi (Fachverband der Bauelemente Distribution e.V.) and is actively involved in the relevant environmental and compliance committees, which work with legislators and manufacturers to develop practical solutions.

GLYN also works continuously and intensively to ensure that our customers have access to our manufacturers' explanations regarding conflict minerals in the products we supply.

As we are only intermediaries, we can only pass on the information provided by the respective manufacturer. Please understand that we are not in a position to fill in lists sent to us, but can only process enquiries about specific items.

Please contact your local distributor if you have any further questions regarding conflict minerals in products.
